

## HOW A WATCH BECOMES A LIMIT

### DESIGN

Our watches are initially designed in the UK Volume Division head office.

A dedicated team of designers create ranges suitable for our collection.

### ORDERING

These watches are then ordered to the Limit specifications which comply with EU legislation:

- ROHS
- ROHS II
- NICKEL SAFE
- WEEE DIRECTIVE
- REACH

### TESTING

Upon final production, samples of the delivery are sent to our QC department, which then runs a stringent test procedure on their components including glass, strap, case (water resistance) and movement.

They are also checked to make certain that the appearance of the watch matches the original graphics and the quality complies with EU legislation.

### PRODUCT

This process is carried out on all models to ensure that every customer receives the perfect Limit watch.
